

MAINTENANCE IN MINUTES

SIMPLE. FAST. EFFECTIVE.

75-90% SEDIMENT CAPTURE | 60-90% GROSS SOLIDS CAPTURE

Rain Guardian pretreatment chambers are designed for effective pretreatment with fast, accessible sediment removal. Maintenance should be completed if areas of the top grate are clogged, the chamber is >75% full, or the vertical filter wall is obstructed.

TURRET | FOXHOLE | FORTRESS | BUNKER

1 Remove top lid - Foxhole and Fortress only

- Set aside safely, protect plant material

2 Clear debris from top grate

- Place debris in chamber

3 Clean chamber

- Remove sediment using hand tools
- Dispose per local regulations

4 Clean filter wall

- Clean with stiff bristled broom or rinse
- Reinstall filter wall with fabric facing inlet
